85 Social Housing Units in Cornellà

Project by Peris + Toral Arquitectes

Guided tour by Peris + Toral Arquitectes

For the 10,000m² of built surface area of the new building, a total of 8,300m² of zero kilometre timber from the Basque Country have been used. The bases of this new residential building are a matrix of communicating rooms that eliminates corridors to guarantee optimum use of the floor plan and the use of timber to enable the industrialization of elements, improved quality of construction and a major reduction of deadlines and CO₂ emissions.
